## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 36-39 are rejected under 35 U.S.C. 102(e) as being anticipated by Yang et al PG-PUB U.S. Patent Number 2003/0223379.

Re Claims 36, 37 and 39, Yang et al teaches in fig. 1, EAP domain 102 (a first network) contains VLAN (a second protocol) running a EAPS (a first protocol loop avoidance protocol instance) [0021+] wherein the 102 logical coupled to the STP domain 104 (a second network) running a STP (not running the first loop avoidance protocol instance) wherein a logical network switch receives messages, [See fig. 5, 0032], from the STP domain to detects a loop in the STM domain (second network) and protect the EAPS domain (first network) by blocking one or more ports to the STP domain.

Re Claim 38, refer to Claim 37, wherein step 508 blocks one of the ports in the EAPS domain.

***Response to Arguments***

3. Applicant's arguments with respect to claims 36-39 have been considered but are moot in view of the new ground(s) of rejection.

***Allowable Subject Matter***

4. Claims 1-35, 40-45 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Re Independent Claims 1, 10, 19, 27, 35, 44, and 45, prior art fails to teach the switching device comparing the first and second references to detect the loop in the second network not running the first avoidance protocol instance in the first network.
